Project 2 Proposal—Up, Up and Awayyyyy

Project Participants: Jared Nieves, Melinda Eudy, Zehra Tokatli and Sarah Green

With Atlanta and Los Angeles being two of the busiest airports in the country and ones that carry a heavy load of international travel, we wanted to dive into the data to see which countries are flying the most into the two airports.

Questions to answer:

- Which country flies into Atlanta airport the most and which flies in the least?
- Which country flies into Los Angeles airport the most and which flies in the least?

How we are going to retrieve our results:

- Pull data from API that gives us all flight information coming into Atlanta airport between the dates of January – April 2021.
- Create a leaflet map that will display the number of flights by country coming out of each of the airports.
- Create a scatter plot and side by side bar chart that will be interactive based on what the user would like to see.
